Employee Competency Handbook

How the competency framework works, what every word on the screen means, and the exact click path for HR, for managers and for employees.

CHAPTER 1

What the module does

HR decides which skills each job needs and how much each one counts. Every review period, employees rate themselves, managers give the official rating, and the module works out the scores, the skill gaps, and the actions to close them.

Six things happen in a fixed order. Nothing later works until the step before it is done.

THE CHAIN, END TO END

STEP	WHAT IS BUILT	WHERE	WHO
1	**Competencies** — the list of skills, grouped into categories	`Competency ▸ Configuration`	HR
2	**Job competency matrix** — which skills a job needs, at what level, at what weight	`Job Position ▸ Competency Matrix`	HR
3	**Review cycle** — the period being reviewed, such as Q3 FY 2026-27	`Competency ▸ Assessments ▸ Review Cycles`	HR
4	**Assessments** — one per employee, generated from the matrix	Generated by the cycle	HR, then employee, then manager
5	**Scores and gaps** — calculated the moment ratings are entered	On the assessment	Automatic
6	**Development plans** and the **competency profile**	`Competency ▸ Development`	Manager, then automatic

> THE ONE RULE WORTH LEARNING FIRST
>
> A job's skill weights must total **exactly 100%**, and its matrix must be **Validated**. Until both are true, no assessment can be generated for anyone holding that job.

CHAPTER 2

Every word on the screen

The module uses a handful of terms consistently. Learn these and the rest of the manual reads itself.

SETUP WORDS

Competency Category	A group of related skills — Communication, Leadership, Quality & Process. Eleven ship pre-loaded.
Competency	One skill, with a code such as `OWN-001`. Seventeen ship pre-loaded.
Scope	Which sub-score a skill feeds: **Core** (expected of everyone), **Functional** (the craft of the job) or **Leadership**. A category sets the default; a single competency may override it.
Company-wide	A skill every job needs. The fifteen company-wide ones total exactly 100%, so one button builds a matrix that validates with no further editing.
Development Threshold	A rating below this (default `3`) marks the skill as needing development, even where the job's requirement is met.
Evidence Required	The manager must record a comment or evidence for this skill before the review can be completed. **Ticked on all seventeen pre-loaded skills.**
Required Level	The level the job expects, 1 to 5. Rating below it is a gap.
Minimum Level	Optional. The lowest level still acceptable in the role, for telling "below target" from "below acceptable". It cannot exceed the Required Level.
Weightage %	How much of the overall score a skill carries.
Mandatory	A must-have skill for the role. Only mandatory skills count toward readiness for a role.
Assess	Include this skill on generated assessments. Untick to record a requirement for reference only — such a line carries no weight.
Effective From / To	Optional dates. A requirement outside these dates is skipped when assessments are generated.
Matrix Status	`Draft` or `Validated`. Only a validated matrix can produce assessments.

REVIEW WORDS

Review Cycle	The window a round of reviews belongs to — quarterly, half-yearly or annual. Quarter-on-quarter improvement is measured from one completed cycle to the next.
Assessment	One employee's review inside one cycle. An employee can have only one assessment per cycle.
Assessment Line	One row per skill inside an assessment. Each line **copies** the job matrix as it stood when the assessment was created, so re-weighting a job next quarter never rewrites a signed-off review.
Reviewer	The manager who owns the manager review. Defaults to the employee's Manager, or the department manager.

Self Rating	The employee's own rating. Reference for the conversation — it never counts toward the score.
Manager Rating	The manager's rating. The Final Rating fills in from it automatically.
Final Rating	The official rating and the only one that scores. The manager may override it.
Previous Rating	The same skill's final rating in the employee's last completed assessment, copied in when the assessment is generated.

RESULT WORDS

Score %	What one line contributes to the overall score.
Overall Score % · / 5	The whole review, as a percentage and back on the 1–5 scale.
Core / Functional / Leadership Score	Weighted average rating out of 5 within each scope. Leadership reads 0 and stays hidden when the job's matrix has no leadership skill.
Gap	Final Rating minus Required Level.
Gap Status	`No Gap` `Improvement Required` `Critical Gap`
Strength	A rating of 4 or 5 that also meets the job's requirement.
Development Required	Rating below the threshold, or any negative gap. This is what "gap" means in the counters and in the `Raise Development Plans` button.
Improvement	This score minus the previous completed score. Positive means the employee improved.
Target Job	The role the employee is being grown toward. Readiness is measured against it.
Role Readiness %	Share of the target job's **mandatory** skills the employee already meets.
Readiness Status	`Developing` `Progressing` `Near Ready` `Ready`
Performance / Potential	Low, Medium or High. Typed in by the manager — never calculated — and used by the Leadership Pipeline report.
Development Plan	One action against one gap, with an owner, a target date and a completion percentage.
Competency Profile	The employee's current level in each skill. It moves only when an assessment is completed.

CHAPTER 3

The 1–5 rating scale

Every level in the module — required, minimum, self, manager, final, target — uses this one scale. Ratings are whole numbers only.

RATING	LABEL ON SCREEN	READ IT AS
1	Needs Improvement	Below what the job can work with. Needs evidence recorded.
2	Developing	Getting there with support. Needs evidence recorded.
3	Competent	Does the job unaided. The default requirement and the default threshold.
4	Strong	Better than the job asks. Counts as a strength.
5	Expert / Role Model	Sets the standard for others. Needs evidence recorded.

> WHY 1, 2 AND 5 ARE SPECIAL
>
> These three are the ratings a reader will question, so the module insists the manager writes a `Manager Comment` or `Evidence` before the assessment can be completed. Any skill with `Evidence Required` ticked needs the same — and that is ticked on everything pre-loaded, so in practice every line needs a comment.

CHAPTER 4

Who can do what

Three roles, each one including everything the role above it can do. Set them on a user at `Settings ▸ Users & Companies ▸ Users`, in the **Employee Competency** section.

ROLE	SEES	CAN DO
Employee	Only their own assessment, profile and plans	Enter their self rating and comments while the review is open. Read the competency list. Cannot create or delete anything.
Department Manager	Their own records, plus anyone who names them as Reviewer, plus everyone in a department they manage	Enter manager and final ratings, set Performance and Potential, raise and run development plans, cancel an assessment, read the reports.
HR Competency Manager	Everything, in every department	Everything above, plus: build categories and competencies, edit and validate job matrices, run review cycles, regenerate lines, reset an assessment or a cycle to draft. Also grants Odoo's HR Manager rights.

> BEFORE YOU TEST ANYTHING
>
> The **Competency** app menu is invisible to a user with none of these three roles — an ordinary Odoo login does not get one automatically. Assign the role first, then reload the browser.

CHAPTER 5 · HR

Build the framework

The module installs a complete, usable framework. Most teams adjust it rather than build one from scratch.

Check what you already have

1. Open `Competency ▸ Configuration ▸ Competency Categories`. Eleven categories are listed. The `Default Scope` column is what new skills in that category inherit.
2. Open `Competency ▸ Configuration ▸ Competencies`. Seventeen skills are listed with their codes and default weights. The full list is in the appendix.

Add a skill of your own

1. From the Competencies list, click **New**.
2. Fill in `Competency Name`, pick a `Competency Category`, and give it a `Competency Code` — the code must be unique and is what makes spreadsheet imports possible.
3. Set `Default Weightage`. This is only a suggestion offered when the skill is added to a job; each job may override it.
4. Leave `Development Threshold` at 3 unless this skill needs a higher bar.
5. Use the **Evaluation Guidelines** tab to describe what each of the five ratings looks like. This is the single most useful thing you can do for rating consistency — managers read it while reviewing.
6. Tick `Company-wide` only if every job needs this skill. Doing so changes what the one-click matrix button produces, and will push the company-wide total off 100%.

> EDITING, NOT DELETING
>
> A skill that has ever been assessed cannot be deleted — history depends on it. **Archive** it instead: archived skills keep their history but are never offered for new matrix lines or generated onto new assessments.

CHAPTER 6 · HR

The job competency matrix

A job's matrix is the standard the people in that job are measured against. This is the step that most often blocks a first test, so it is worth doing carefully once.

Build and validate a matrix

1. Open `Employees ▸ Configuration ▸ Job Positions` and pick a job. Go to the **Competency Matrix** tab.
2. Click **Add Company-wide Competencies**. Fifteen lines appear, each at its default weight and with a required level of 3. `Total Weightage %` now reads 100.
3. Add anything specific to this job — a technical skill, or a leadership skill for a job that leads. For each line set `Required Level`, `Weight %` and whether it is `Mandatory`.
4. Rebalance so the total returns to exactly 100. Adding a line without reducing others is refused the moment the total passes 100.
5. Click **Validate Matrix** in the header. The status badge turns `Validated` and the lines become read-only.

To change a validated matrix, click **Reset Matrix to Draft** first. Assessments already generated are untouched by anything you do here — they kept their own copy.

The three flags people mix up

FLAG	AFFECTS	DOES NOT AFFECT
Assess	Whether the skill appears on generated assessments, and whether its weight counts toward the 100%	Nothing else — an unassessed line is a note to the reader
Mandatory	Readiness for the role: only mandatory skills are counted	The overall score, which uses weights alone
Weightage %	The overall score	Readiness, and whether a gap is flagged

CHAPTER 7 · HR

Run a review cycle

HR	HR	HR	HR
Draft	**Open**	**Assessment Running**	**Completed**
Set dates and coverage	Ready to generate	Reviews are live	Locked for good

1. Open `Competency ▸ Assessments ▸ Review Cycles` and click **New**.
2. Name it the way the business says it — **Q3 FY 2026-27**. Pick the `Review Type` and the period's `Start Date` and `End Date`.
3. Set the two deadlines. `Self Review Deadline` and `Manager Review Deadline` are what the daily reminder emails chase; leave them empty and no reminders go out. Neither may fall before the cycle starts, and the manager's may not fall before the employee's.
4. On the **Coverage** tab, either name the employees, or name departments, or leave both empty to cover every employee in the company whose job has a validated matrix. Naming employees overrides the department list.
5. Click **Open Cycle**, then **Generate Assessments**.

Generating does four things: it creates one assessment per employee, copies each employee's job matrix onto it, moves each one to `Employee Review`, and emails every employee with an activity on their to-do list. Anyone whose job has no validated matrix is skipped, and the cycle's chatter records exactly who and why. Employees who already have an assessment in this cycle are skipped silently, so you can safely press the button again after fixing a matrix.

Closing the cycle

Click **Complete Cycle** once every assessment is completed or cancelled. If any are still open the button refuses and names up to ten of them. After closing, the cycle and everything in it is read-only: no new assessments, no edits to ratings, dates, reviewers or summaries. An HR Competency Manager can click **Reset to Draft** to reopen it.

> WHAT THE CYCLE GIVES YOU BEYOND TIDINESS
>
> Improvement is measured between cycles. An assessment's "previous" one is the employee's most recent **completed** assessment from a cycle that **ended before this cycle started**. Overlapping cycle dates therefore break the trend columns — keep periods clean and consecutive.

CHAPTER 8 · EMPLOYEE

The self assessment

For the employee, the whole module is two menu items and one screen.

1. Open `Competency ▸ My Competency ▸ My Assessments` and open the one for the current cycle. It will be in `Employee Review`.
2. On the **Competencies** tab, enter a `Self Rating` from 1 to 5 on **every** line. The `Required Level` column shows what the job asks for; `Previous` shows where you landed last cycle.
3. Use `Employee Comments` to say what you base the rating on. Turn on the column from the ⚙ icon at the right of the header row if you do not see it.
4. Click **`Submit Self Assessment`**. Miss a rating and the module names exactly which skills are still blank.

Submitting hands the review to your manager and closes your side of it: self ratings and employee comments can no longer be changed, because they are now part of the record being reviewed. Your rating never sets your score — the final rating your manager approves is the official one.

> WHERE TO SEE YOUR OWN STANDING
>
> `Competency ▸ My Competency ▸ My Development Plans` lists the actions raised against your gaps, and the actions you were made accountable for. Your own employee record's **Competency** tab shows your current level in every skill, your score history and your readiness for a target role.

CHAPTER 9 · MANAGER

The review

HR GENERATES	EMPLOYEE	MANAGER	MANAGER
Draft	**Employee Review**	**Manager Review**	**Completed**
Lines created from the matrix	Self ratings, then submit	Manager and final ratings	Profile updated

1. Open `Competency ▸ Assessments ▸ To Review`. It lists every assessment naming you as Reviewer that is still open.
2. On the **Competencies** tab, enter a `Manager Rating` on every line. `Final Rating` copies it as you go; type over the final rating where you want it to differ, and say why in the comment.
3. Write a `Manager Comment` or `Evidence` on every line. The module will not let you complete without one wherever the rating is 1, 2 or 5, or the skill has Evidence Required ticked.
4. Watch the colours as you type: rows turn `red` for a critical gap, `amber` for improvement required and `green` for a strength, and the score group at the top recalculates live.
5. On the **Readiness** tab, set `Target Job` if this person is being grown toward a role, and set `Performance Rating` and `Potential Rating`. These two are your judgement, not arithmetic, and they drive the Leadership Pipeline report.
6. On the **Summary** tab, write the `Strength Summary` and `Development Summary` — the two paragraphs the employee will actually remember.
7. Click **`Raise Development Plans`**. One draft plan is created for every gap that has none yet, each aimed at the required level, owned by you, dated to the end of the cycle.
8. Click **`Complete Assessment`**.

Completing writes the approved final ratings onto the employee's competency profile and locks the review. If any gap still has no plan against it, the module completes anyway and posts a note in the chatter naming those skills — a gap with no plan is a management conversation, not a data error.

THE OTHER BUTTONS IN THE HEADER

BUTTON	WHEN IT SHOWS	WHAT IT DOES
`Start Self Assessment`	Draft	Opens the review to the employee and notifies them. The cycle normally does this for you.
`Start Manager Review`	Employee Review	Moves the review to your stage without waiting for the employee — but only once every manager rating, final rating and required comment is already filled in. See known quirks.
`Regenerate Lines`	Draft, Employee Review · HR only	Throws away the current lines and re-copies the job matrix. Every rating entered so far is lost; it asks for confirmation.

BUTTON	WHEN IT SHOWS	WHAT IT DOES
Cancel	Any open state	Marks the review cancelled. It stops counting anywhere.
Reset to Draft	Any state · HR only	Reopens a completed or cancelled review. Ratings are kept; the profile is not rolled back.

CHAPTER 10

How every number is worked out

Nothing here is entered by hand. If a figure looks wrong, one of these formulas will explain it.

A worked example

One employee, on a job carrying the fifteen pre-loaded company-wide skills. Every requirement is level 3, every threshold is 3, and every skill is Core.

ASSESSMENT: THE FIFTEEN LINES AND WHAT EACH CONTRIBUTES

COMPETENCY	WEIGHT %	REQUIRED	FINAL SCORE	% GAP	STATUS
Attitude	5	3	4	4.00	+1	Strength
Professionalism & Reliability	5	3	4	4.00	+1	Strength
Ownership & Accountability	10	3	3	6.00	0	No Gap
Problem Solving & Analytical Ability	10	3	3	6.00	0	No Gap
Planning & Prioritisation	5	3	2	2.00	−1	Improvement Required
Execution / Result Orientation	10	3	4	8.00	+1	Strength
Communication	10	3	3	6.00	0	No Gap
Listening & Understanding	5	3	4	4.00	+1	Strength
Business Knowledge	10	3	2	4.00	−1	Improvement Required
Customer Orientation	5	3	3	3.00	0	No Gap
Teamwork & Collaboration	5	3	4	4.00	+1	Strength
Learning Agility	5	3	4	4.00	+1	Strength
Adaptability & Change Readiness	5	3	3	3.00	0	No Gap
Innovation / Continuous Improvement	5	3	2	2.00	−1	Improvement Required
Quality of Work	5	3	3	3.00	0	No Gap
Totals	**100**			**63.00**		**3 gaps · 6 strengths**

The header of that assessment therefore reads `Overall Score %` 63.00, `Overall Score / 5` 3.15, `Core Score / 5` 3.15, `Strengths` 6, `Critical Gaps` 0 — and the gap counter, which drives the development-plan button, reads 3.

The formulas

FIGURE	HOW IT IS WORKED OUT
Score % (one line)	(Final Rating ÷ 5) × Weight. A 4 on a 10% skill gives 8.00.
Overall Score %	The sum of every line's Score %. With weights at 100%, all 1s give 20% and all 5s give 100%.
Overall Score / 5	Overall % ÷ 20.
Core / Functional / Leadership	Weighted average rating inside that scope: Σ(rating × weight) ÷ Σ(weight). It is out of 5, not out of 100, and it ignores the other scopes entirely.
Gap	Final Rating – Required Level. `No Gap` at 0 or above, `Improvement Required` at –1, `Critical Gap` at –2 or worse.
Development Required	Final Rating below the Development Threshold, **or** a negative gap. So a job that asks for 2 on a skill whose threshold is 3 still flags development at a rating of 2.
Strength	Final Rating of 4 or more and gap of 0 or more.
Improvement	This Overall Score / 5 – the previous one. With no previous completed assessment it reads 0, not the whole of this score.
Role Readiness %	Of the target job's mandatory, active skills: how many the employee's level meets, ÷ how many there are. The employee's level comes from this assessment's final ratings first, and from their standing profile for skills this job never assessed.
Readiness Status	Under 60% `Developing` · 60–75% `Progressing` · 75–90% `Near Ready` · 90% and over `Ready`. One override: being two or more levels short on any mandatory skill of the target job holds the status at Near Ready however high the percentage runs.

Nothing is a gap until somebody has rated it. Before a final rating exists, a line's score, gap and status are all blank rather than zero — which is why a half-finished review does not look like a disaster.

CHAPTER 11

Development plans

A plan is what is being done about one gap. It is the only part of the module that lives between reviews.

Raising them

- **In bulk** — `Raise Development Plans` on the assessment creates one plan per unplanned gap.
- **One at a time** — the small graduation-cap button at the end of any gap row on the Competencies tab.
- **From scratch** — `Competency ▸ Development ▸ Development Plans`, then `New`. Pick the employee and the skill; a plan does not have to come from an assessment.

The fields that matter

Action	The plan's name. Write the actual action — "Lead the Q3 migration workshop", not "Improve communication".
Action Type	Training · Mentoring · Project / On-the-job · Certification · Exposure · Self Learning. Picking Training or Certification ticks `Training Required` for you, which is how HR pulls the training list.
Assigned Person	Who is accountable for the action happening — usually the manager or a mentor, not the employee. This is who the overdue email goes to.
Target Date	Required. Past this date, while the plan is still Planned or In Progress, the plan is **Overdue**: the row turns red, the form shows an Overdue ribbon, and a daily email starts chasing the owner.
Target Level	The level the employee should reach once the action is done. Pre-filled with the job's required level.
Completion %	Progress. It must read 100 before the plan can be marked Completed.
Result / Outcome	What actually changed. Fill this in when you close the plan — it is what the next reviewer reads.

Buttons run `Start` → `Mark Completed`, with `Cancel` and `Reset to Planned` available throughout. Marking a plan completed sets its completion to 100 for you.

> A PLAN DOES NOT CHANGE A RATING
>
> Completing a plan records that the action happened. The employee's level only moves when their next assessment is completed with a higher final rating. Nothing back-dates a score.

CHAPTER 12

The competency profile

The profile is one row per employee per skill, holding their `Current Level`. Find it at `Competency ▸ Development ▸ Competency Profiles`, or on the **Competency** tab of any employee record.

- It is written **only** when an assessment is completed, from that review's final ratings.
- It only ever moves forward in time: completing an old review out of order will not overwrite a newer result.
- Its `Required Level` and `Gap` follow the employee's **current** job matrix, live. Move someone to a new job and their profile gaps re-state themselves against the new job immediately — unlike an assessment line, which keeps the history.
- Nobody types in a profile row. HR can correct one, but the honest fix for a wrong level is to correct the assessment.

What the employee form shows

The **Competency** tab gathers everything about one person: `Resource Strength / 5` (their latest completed overall score), the previous score and the improvement between them, the number of open gaps, readiness for their `Target Job`, then three lists — the full competency profile, every development action, and the assessment history. Two stat buttons at the top jump to assessments and to plans.

CHAPTER 13

The three reports

All three live under `Competency ▸ Reporting` and all three count **completed reviews only** — an unapproved rating is not a result.

REPORT	OPENS AS	ANSWERS
Employee Competency	Pivot, grouped by employee. Measures: Final Rating, Gap, Score %	Where does this person stand, skill by skill? Swap rows to Category or Cycle to see their shape or their trend.
Department Skill Matrix	Pivot: departments down, competencies across	Where is a department strong and where is it thin? Switch the measure to Gap to find where a department sits furthest from what its jobs require.
Leadership Pipeline	List, grouped by readiness	Who is ready for a bigger role? Shows the leadership score, performance, potential, readiness and critical gaps side by side. Only people with a Target Job appear here — no target job, no row.

Useful filters on the first two: **Below Requirement**, **Critical Gap**, **Strengths**, and the Core / Functional / Leadership split. On the pipeline: **High Potential** and **Ready for Next Role**.

CHAPTER 14

Emails and reminders

Five emails, two of them on a daily schedule. Mail goes to the employee's `Work Email`, so a missing work email means a missing notification.

EMAIL	GOES TO	SENT WHEN
Assessment Assigned	Employee	The review opens to them. An activity is also placed on their to-do list, dated to the self-review deadline.
Manager Review Required	Reviewer	The employee submits. An activity is placed on the reviewer's list, dated to the manager-review deadline.
Self Review Overdue	Employee	Daily, while the cycle is running, the review is still with the employee, and the self-review deadline has passed.
Manager Review Overdue	Reviewer	Daily, on the same terms, once the manager-review deadline has passed.
Development Plan Overdue	Assigned Person	Daily, for every plan past its target date that is not yet completed or cancelled.

The two daily jobs are `Competency: Pending Review Reminders` and `Competency: Overdue Development Plans`, under `Settings ▸ Technical ▸ Scheduled Actions`. Reminders only chase cycles in `Assessment Running`, and only where the relevant deadline is filled in.

CHAPTER 15

Messages you may hit

Every one of these is the module protecting the numbers. The fix is always in the same place as the cause.

WHAT YOU SEE	WHY	FIX
"The competency weightages … total 104.00%. They cannot pass 100%"	You added or raised a weight past the ceiling	Reduce another line first. The ceiling is enforced as you type; falling short of 100 is allowed until you validate.
"They must total exactly 100% before the matrix can be validated"	Validating at 95%	Rebalance to 100. Only lines with **Assess** ticked count.
"… is validated, so its weightages must stay at 100%"	Editing a validated matrix	Click `Reset Matrix to Draft` first.
"No employee matches this cycle"	Coverage found nobody — usually because no job has a validated matrix	Validate at least one job matrix, or name employees on the Coverage tab.
"… has no job position, so there is no competency matrix to assess against"	An assessment was raised for an employee with no job	Set the employee's Job Position.
"The competency matrix of … has no competency in effect on **date**"	Every matrix line is outside its Effective From / To window for this cycle's end date	Clear or widen the effective dates.
"This employee already has an assessment in this review cycle"	One review per employee per cycle, always	Open the existing one.
"Rate every competency before submitting. Still to rate: …"	A self rating is blank	The message names the skills.
"Every competency needs a manager rating and a final rating"	Completing with a blank rating	The message names the skills.
"Record the evidence behind these ratings before submitting"	A rating of 1, 2 or 5, or a skill with Evidence Required, has no comment and no evidence	Write a Manager Comment or fill Evidence on the named lines.
"Only a reviewing manager can set the manager rating …"	An employee tried to save a manager-side field	Expected. Only Self Rating and Employee Comments are the employee's to fill.
"The self assessment of … has already been submitted"	An employee edited their self rating after submitting	Ask the manager or HR to reset the review to draft if it genuinely needs reopening.
"… belongs to the completed cycle … and can no longer be changed"	Editing a review in a closed cycle	HR resets the cycle to draft, or the correction waits for the next cycle.
"… assessment(s) in this cycle are not completed yet"	Closing a cycle with open reviews	Complete or cancel the ones named.
"… is marked Completed, so its completion must be 100%"	A development plan closed at 40%	Set completion to 100, or use `Mark Completed`, which does it for you.

WHAT YOU SEE	WHY	FIX
"Competency lines can only be regenerated while … Draft or Employee Review"	Regenerating after ratings exist	Intentional. Regenerating discards ratings, so it is blocked once the manager has started.

CHAPTER 16

Known quirks

Five behaviours that are confusing rather than dangerous. They are worth knowing before you conclude something is broken.

1. **The Competency menu is invisible without a role.** No user gets one automatically, including the administrator. Assign Employee, Department Manager or HR Competency Manager first.

2. **Every pre-loaded skill has Evidence Required ticked.** So in practice every line needs a manager comment before the review can be completed, not only ratings of 1, 2 and 5. Untick it on the skills where you do not want that.

3. **"Start Manager Review" does not skip the self assessment.** Its tooltip says it does, but it demands every manager rating, final rating and required comment first. On an untouched review it simply reports what is missing. In practice you either wait for the employee to submit, or fill the manager side in first and then press it.

4. **Employees see Manager Rating and Final Rating as editable columns.** The server correctly refuses the change, so the employee gets an access error on save rather than a hidden column. Nothing is at risk; it just looks wrong.

5. **Changing the Employee on a draft assessment does not refresh Department, Job or Reviewer.** Those three are filled once, when the assessment is created, and deliberately do not follow the employee afterwards — which is right for a mid-cycle transfer but surprising if you simply picked the wrong name. Set them by hand, or delete the draft and start again.

CHAPTER 17

Appendix: what ships pre-loaded

The fifteen company-wide skills

These are what `Add Company-wide Competencies` puts on a job. Their default weights total exactly 100%.

CODE	COMPETENCY	CATEGORY	DEFAULT WEIGHT %
ATT-001	Attitude	Behaviour & Attitude	5
ATT-002	Professionalism & Reliability	Behaviour & Attitude	5
OWN-001	Ownership & Accountability	Ownership & Execution	10
ANA-001	Problem Solving & Analytical Ability	Ownership & Execution	10
EXE-001	Planning & Prioritisation	Ownership & Execution	5
EXE-002	Execution / Result Orientation	Ownership & Execution	10
COM-001	Communication	Communication	10
COM-002	Listening & Understanding	Communication	5
BUS-001	Business Knowledge	Business Knowledge	10
CUS-001	Customer Orientation	Customer Orientation	5
COL-001	Teamwork & Collaboration	Collaboration	5
GRW-001	Learning Agility	Learning & Growth	5
GRW-002	Adaptability & Change Readiness	Learning & Growth	5
IMP-001	Innovation / Continuous Improvement	Learning & Growth	5
QLT-001	Quality of Work	Quality & Process	5
Total			**100**

The two leadership skills

`LED-001` Decision Making and `LED-002` Team Development & Mentoring carry **no default weight** and are not company-wide. Add them to the jobs that actually lead, give them a weight there, and rebalance the rest back to 100%. Only then does the `Leadership Score / 5` appear on those employees' assessments.

The eleven categories

Behaviour & Attitude, Ownership & Execution, Communication, Business Knowledge, Customer Orientation, Collaboration, Learning & Growth and Quality & Process are **Core**. Functional Skills and Technical Skills are **Functional**. Leadership is **Leadership**.

> ALL OF IT IS YOURS TO CHANGE
>
> The pre-loaded framework is a starting point, not a definition the module owns. Upgrading or reinstalling the module will never undo a weight, a threshold or a guideline you deliberately changed.

For whoever maintains the code

WHAT YOU SEE ON SCREEN	MODEL
Competency Category	`employee.competency.category`
Competency	`employee.competency`
Job Competency Matrix line	`employee.job.competency.line`
Review Cycle	`employee.competency.cycle`
Assessment · its lines	`employee.competency.assessment` · `…assessment.line`
Competency Profile	`employee.competency.profile`
Development Plan	`employee.development.plan`
Target Job, readiness, strength score	added to `hr.employee`
Competency Matrix tab and its status	added to `hr.job`
